Media bank for Moodle
Install walk-through

Step by step, with pictures. Everything is done by clicking in your web browser. You do not need to type any commands.

What you will do

1. Download two files.
2. Upload the first one to Moodle and click through the screens.
3. Do the same for the second one.
4. Check that it worked.

It takes about 15 minutes.

For Moodle 5.0, 5.1, 5.2 and 5.3. Both plugins are **Beta**: released for testing. Try them on a copy of your site first.

contenttype_mediabank 0.11.1 · local_mediabank 0.3.1

Before you begin

You need four things:

- **An administrator login** for your Moodle site. Only a site administrator can install plugins.
- **Moodle 5.0, 5.1, 5.2 or 5.3.** Older versions (4.5 and earlier) do not work.
- **A backup of your site.** Ask whoever looks after your Moodle to make one, or make one yourself. If anything goes wrong, a backup is the way back. Try the install on a test copy first if you can.
- **The two plugin files** (see below).

Get the two files

Go to the **Releases** page of the project on GitHub:

https://github.com/billsensei/moodle-repository_mediabank/releases

Open the newest release and, under **Assets**, click these two files to download them:

1st	contenttype_mediabank_2026103000.zip	the main plugin (the "content type")
2nd	local_mediabank_2026103000.zip	the helper tools

Be careful. Do not open or unzip the files. Moodle needs them exactly as downloaded, still ending in **.zip**. If your computer unzips them automatically, download them again.

Be careful. The release also has a third file called **mediabank-…-bundle.zip**. It holds the two files above and the guides. **Do not upload it to Moodle.** Moodle cannot install it and will ask you to "choose a plugin type".

Be careful. Do **not** use the green **Code** button or **Download ZIP** on the project's front page, or the **Source code** links on the release. They give the whole project, which Moodle cannot install either. If Moodle ever asks you to **choose a plugin type**, you have the wrong file: go back and download the two files above.

Tip. The numbers in the file names may be newer than the ones shown here. That is fine. Always install the **content type first** and the **local** file second.

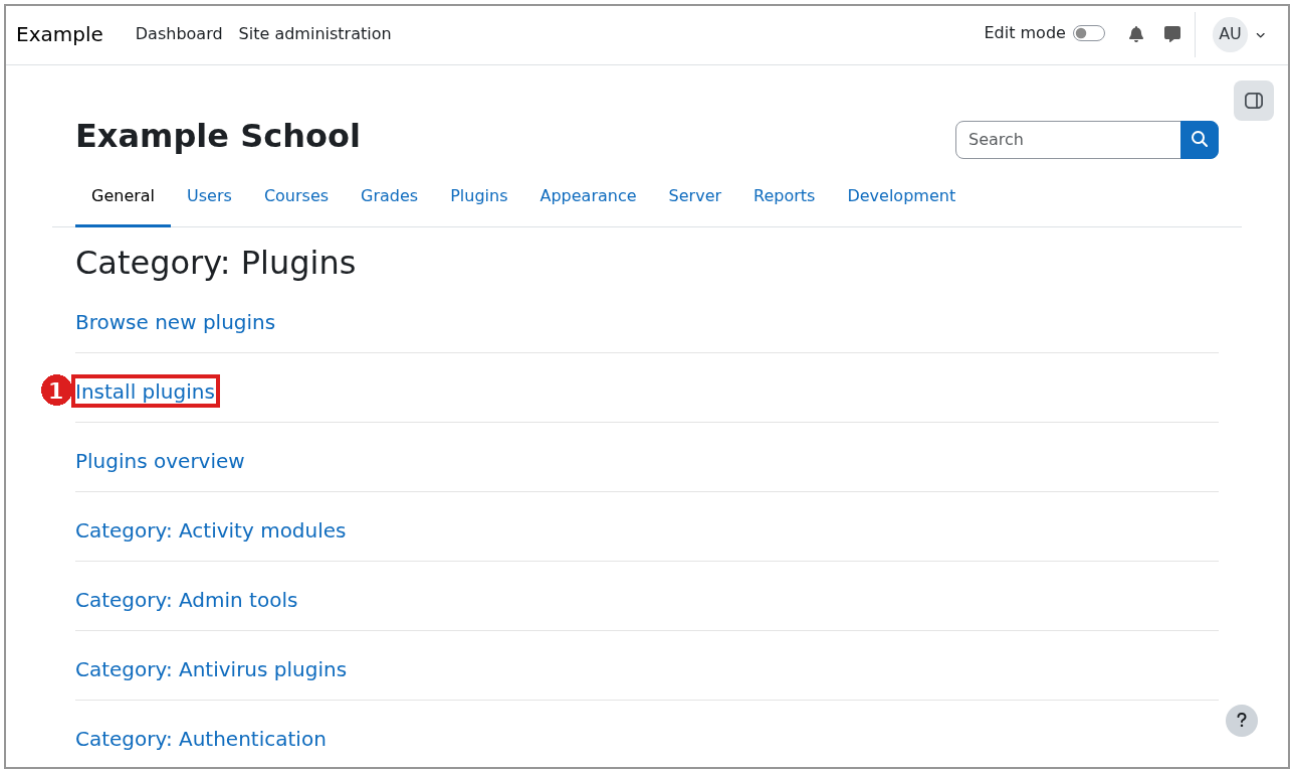

Tip. The pictures in this guide come from Moodle 5.2. Your screens may look a little different (colours, spacing, the order of items) but the buttons have the same names. Red boxes with numbers show where to click.

Part 1: Install the main plugin

The content type: **contenttype_mediabank**.

1 Open the plugin installer

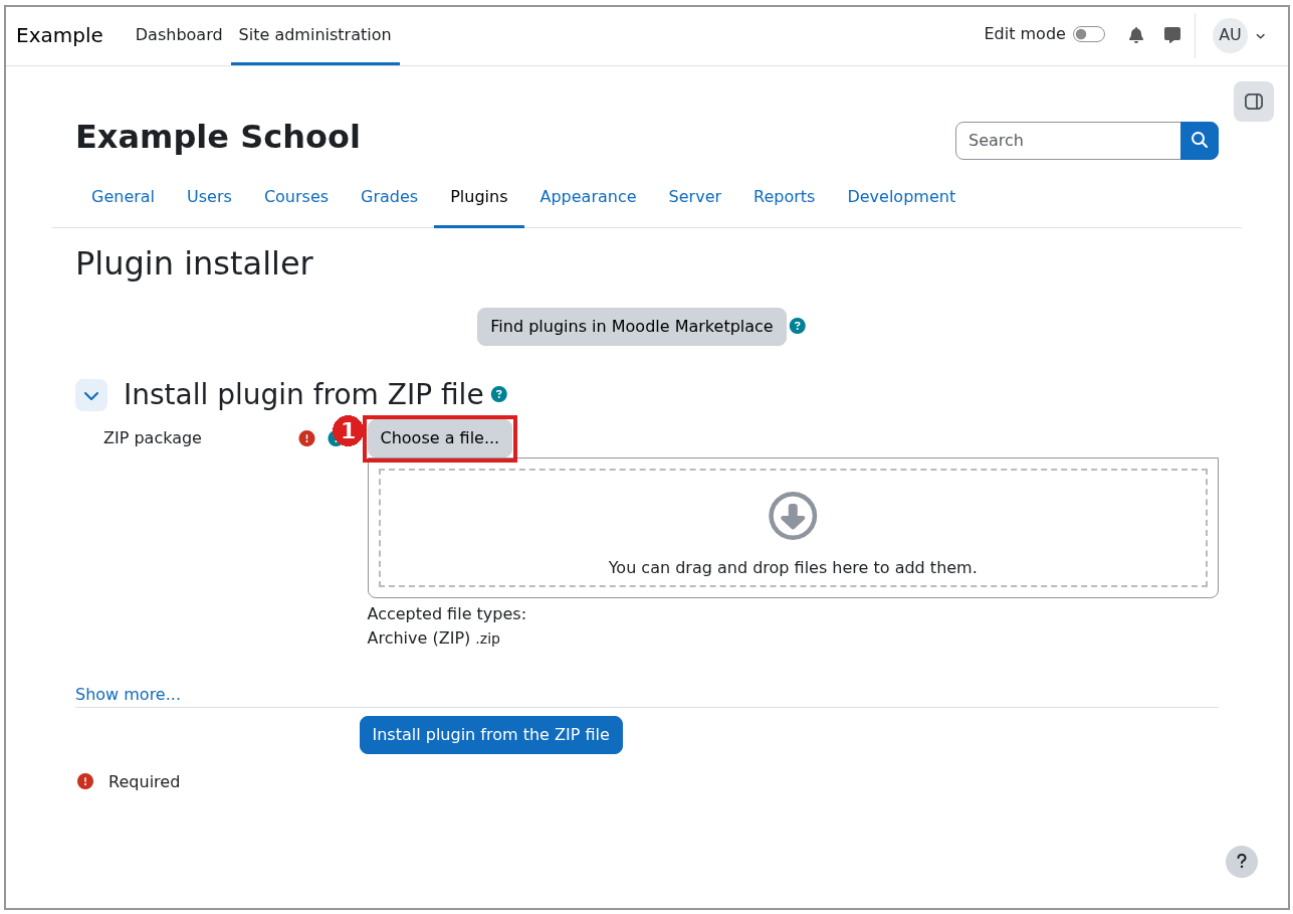

Log in to Moodle as the administrator. At the top of the page, click **Site administration**, then click the **Plugins** tab. Click **Install plugins** (red box 1).

Site administration, Plugins tab: click "Install plugins".

2 Choose the file

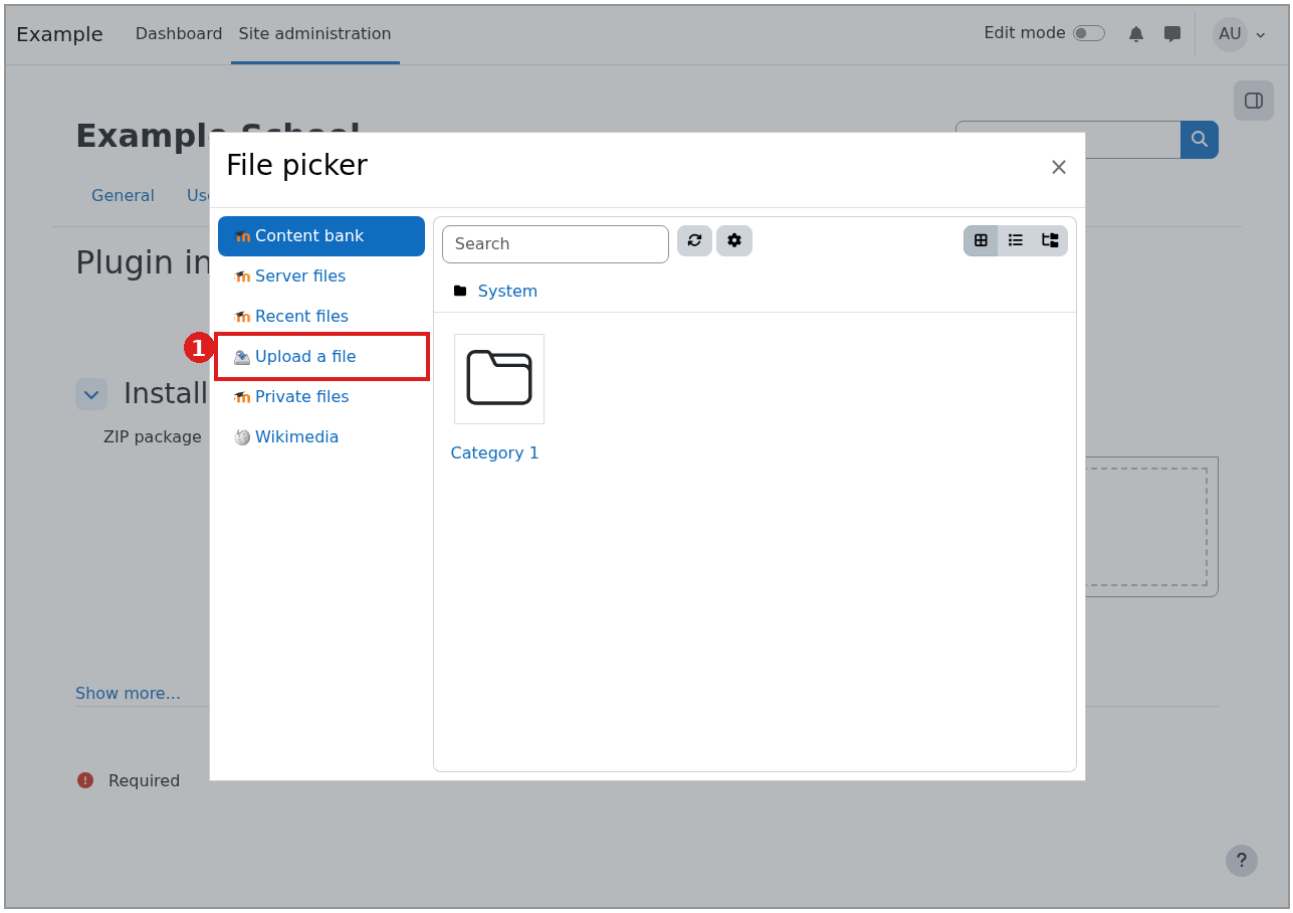

On the **Plugin installer** page, click the grey **Choose a file...** button (red box 1). A small window called **File picker** opens.

The Plugin installer page.

3 Pick "Upload a file"

In the list on the left of the File picker, click **Upload a file** (red box 1).

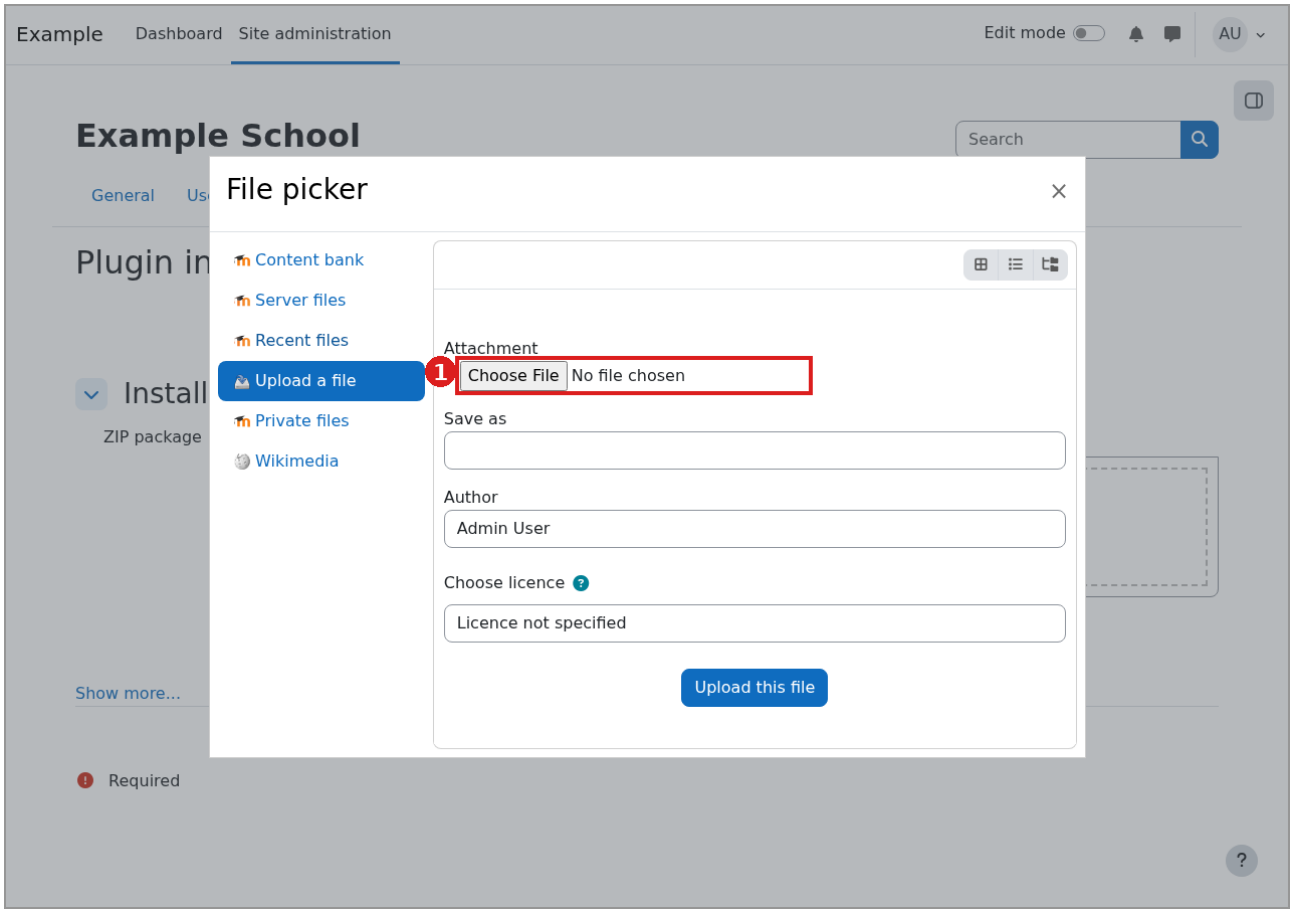

The File picker. Click "Upload a file" on the left.

4 Find the file on your computer

Click **Choose File** (red box 1). Your computer opens its own window for finding files. Go to the folder where you saved the downloads, click **contenttype_mediabank_2026103000.zip**, then click **Open**.

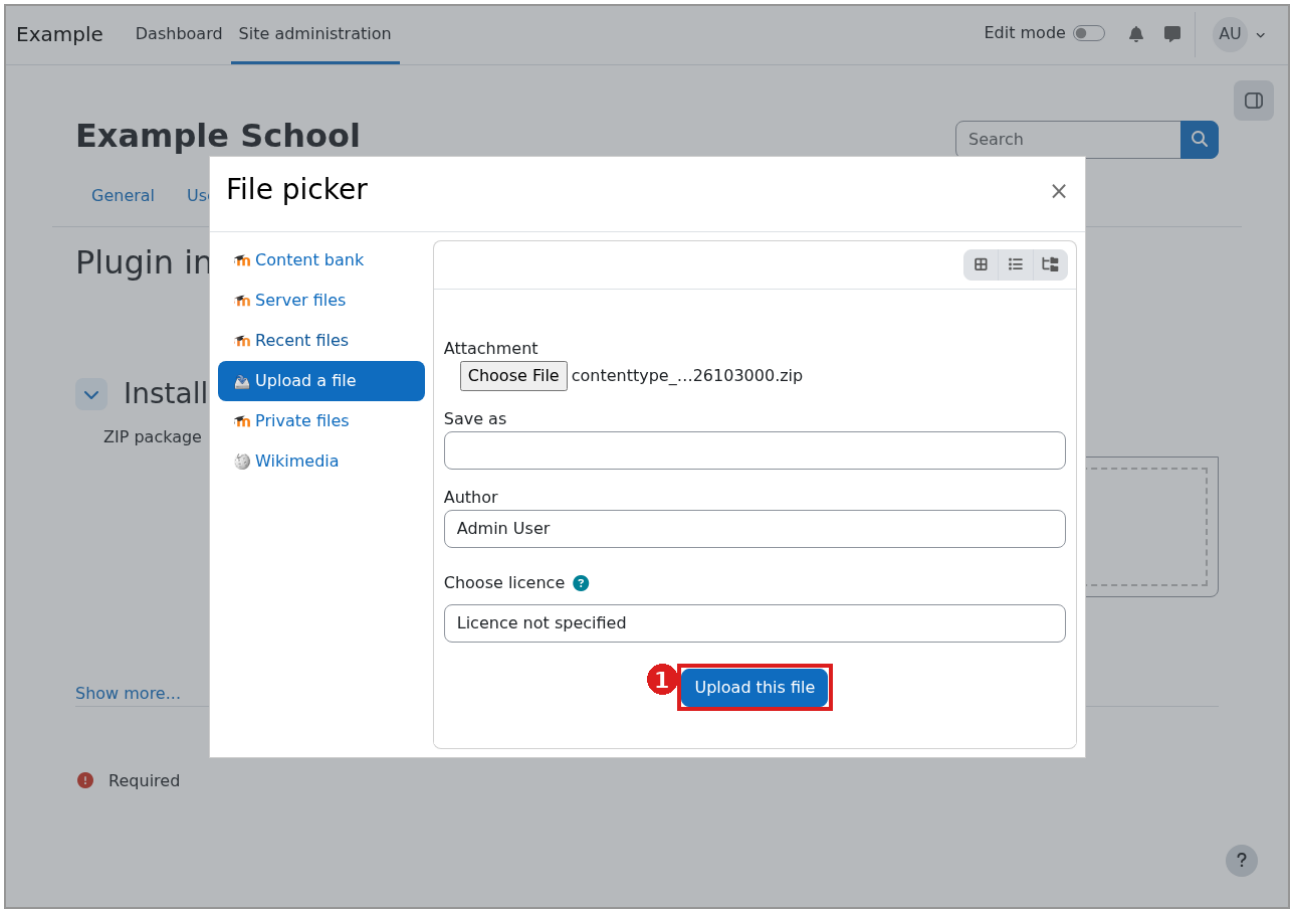

The window you see is part of your computer, so it looks different on Windows, Mac and Linux. It is not shown here.

Click "Choose File", then pick the first zip file.

5 Upload the file

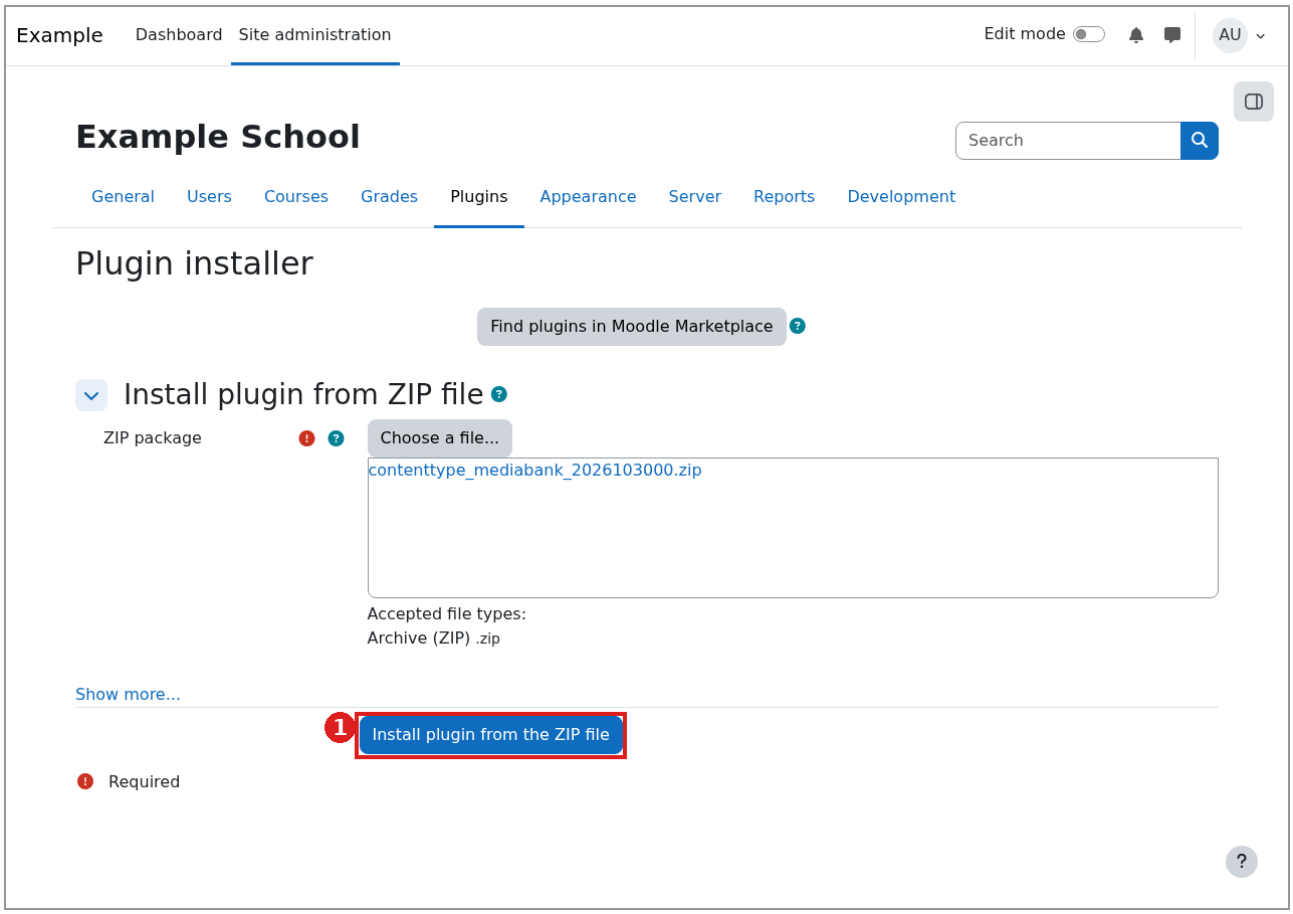

The file name now shows next to the button. Click **Upload this file** (red box 1).

The file name is shown. Click "Upload this file".

6 Start the install

The File picker closes and the file name is listed in the box. Click the blue **Install plugin from the ZIP file** button (red box 1).

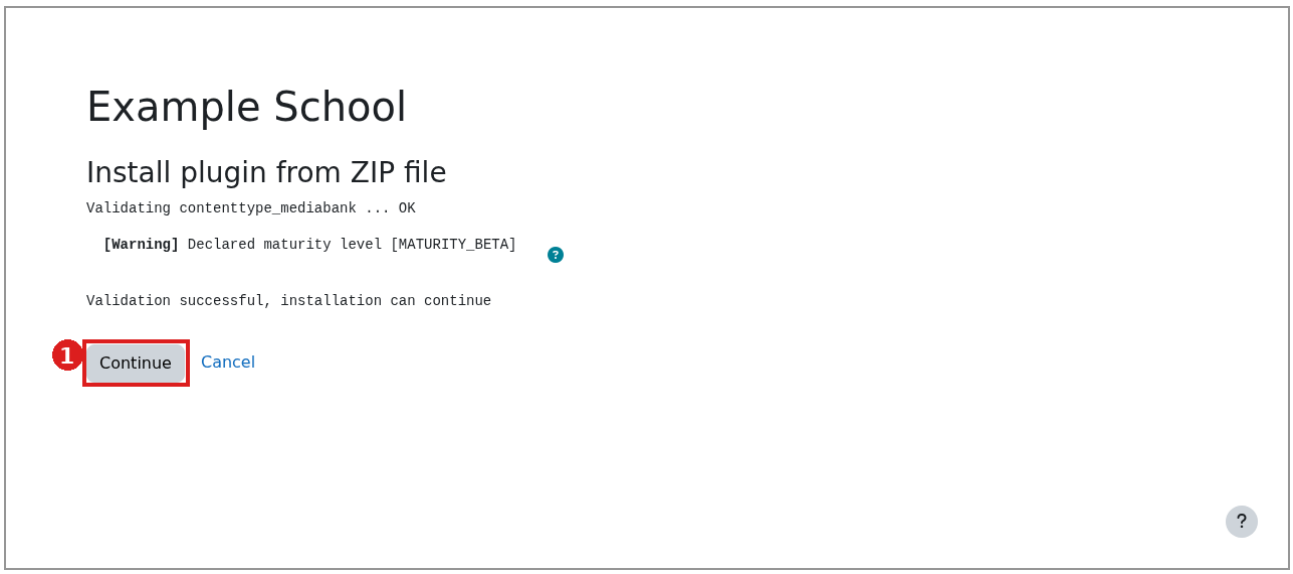

The file is in the box. Click the blue button at the bottom.

7 Moodle checks the file

Moodle checks that the file is a proper plugin. You should see **Validation successful, installation can continue**. Click **Continue** (red box 1).

> **This is normal.** You will also see a line starting **[Warning] Declared maturity level [MATURITY_BETA]**. It only says the plugin is a Beta (test) release. It is not an error.

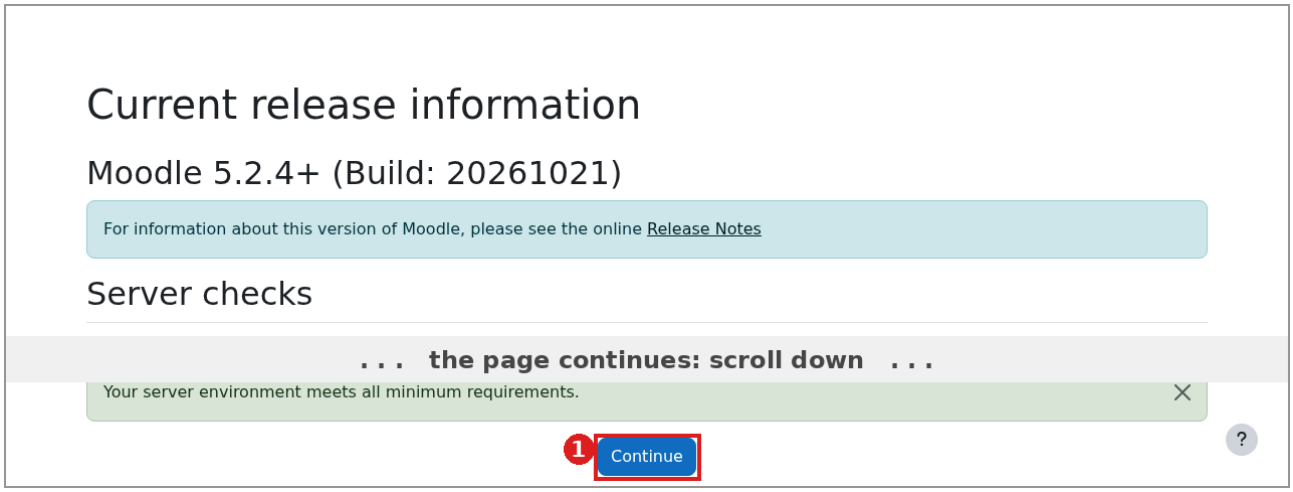

Validation successful. Click "Continue".

8 Server checks

Moodle now shows a long page of checks about your server. Scroll to the **bottom** and click **Continue** (red box 1).

> **This is normal.** Some rows may say **Check** in orange. These are general advice about your server, not about this plugin. The important line is at the bottom: **Your server environment meets all minimum requirements.**

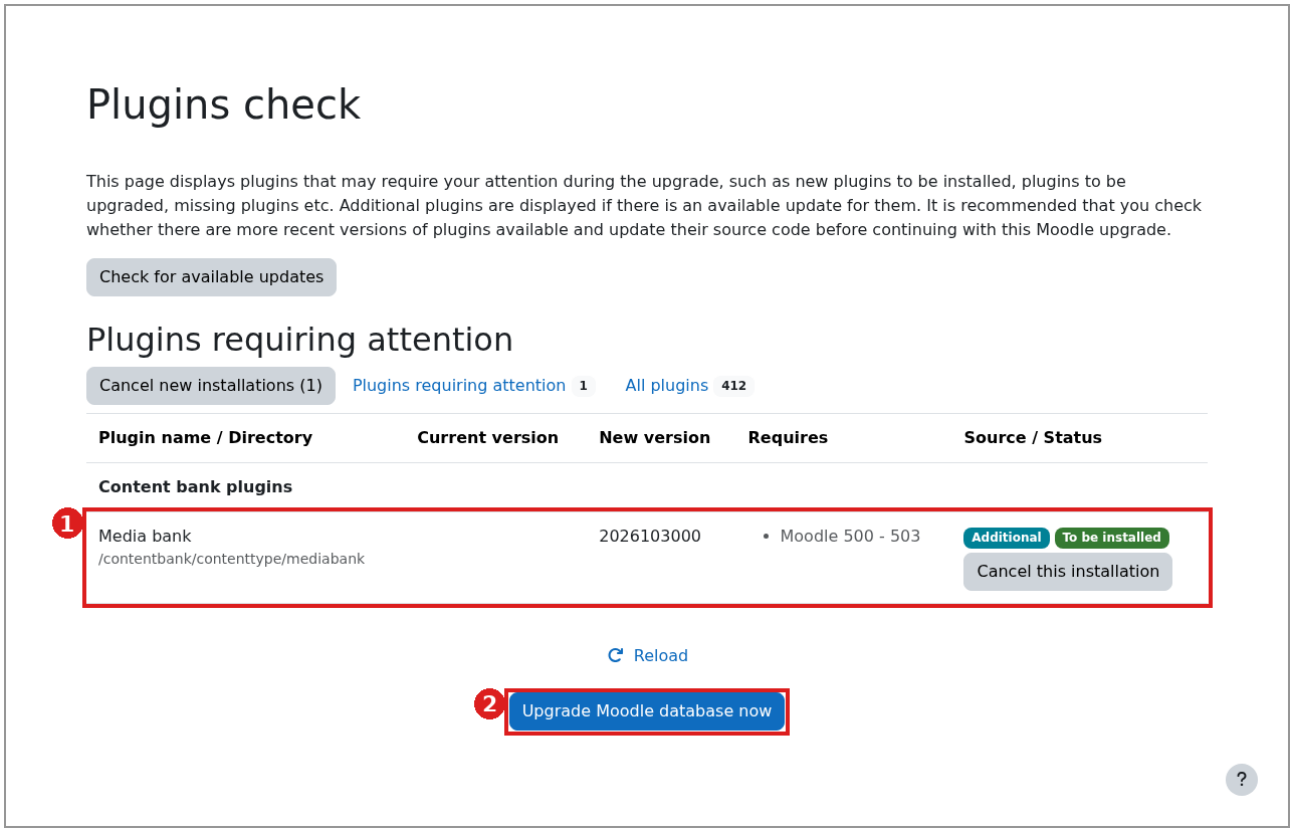

The top of the page, and the bottom with the Continue button.

9 Install into the database

The **Plugins check** page lists **Media bank** with a green **To be installed** label (red box 1). Click **Upgrade Moodle database now** (red box 2).

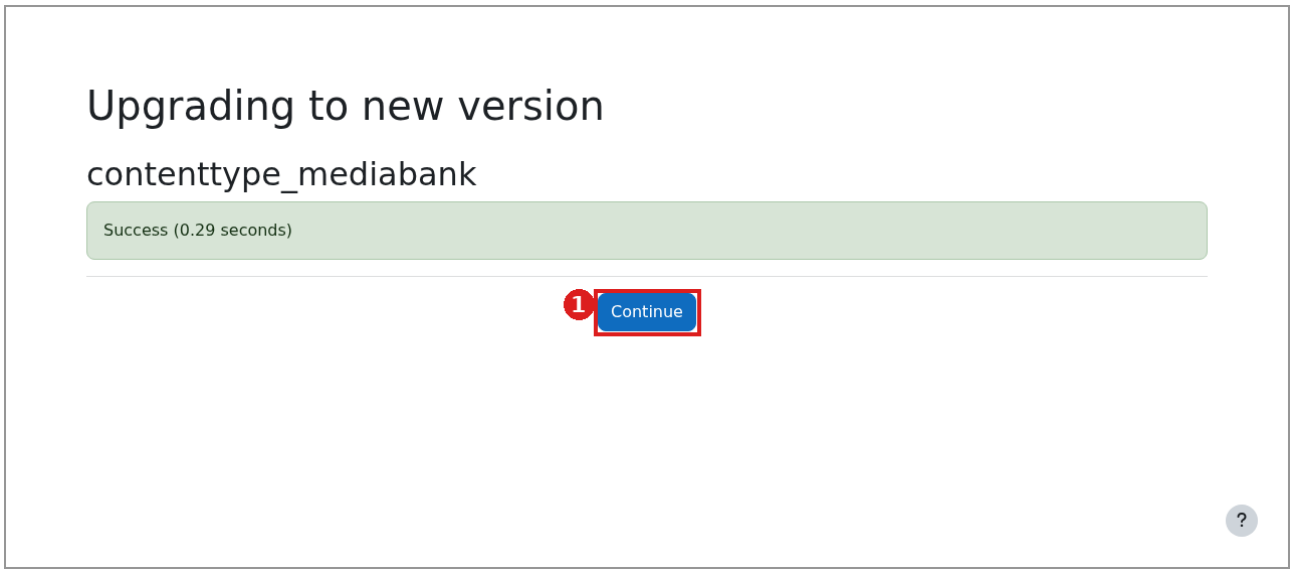

This takes a few seconds. Do not close the page or click Back until it finishes.

Media bank is "To be installed". Click "Upgrade Moodle database now".

10 Success

You should see a green **Success** line for **contenttype_mediabank**. Click **Continue** (red box 1).

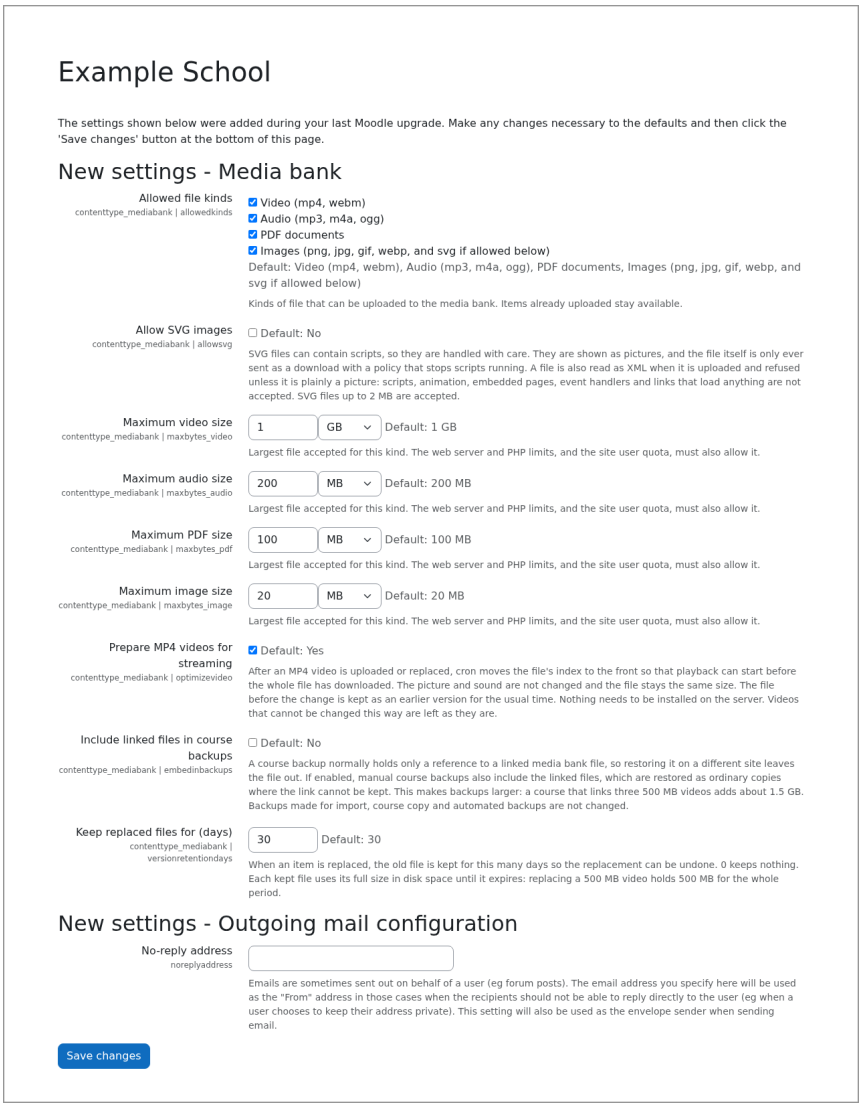

Green "Success" message. Click "Continue".

11 Save the settings

Moodle shows the new settings for the Media bank. **The defaults are fine. You do not need to change anything.** Scroll to the bottom and click **Save changes** (red box 1).

Tip. You may see other Moodle settings on the same page (for example "Outgoing mail configuration"). Leave those as they are.

Tip. Allow SVG images is switched off. That is the safe choice. See the Administrator guide before you switch it on.

The new settings. Leave them as they are and click "Save changes".

The main plugin is installed. Now do the second one.

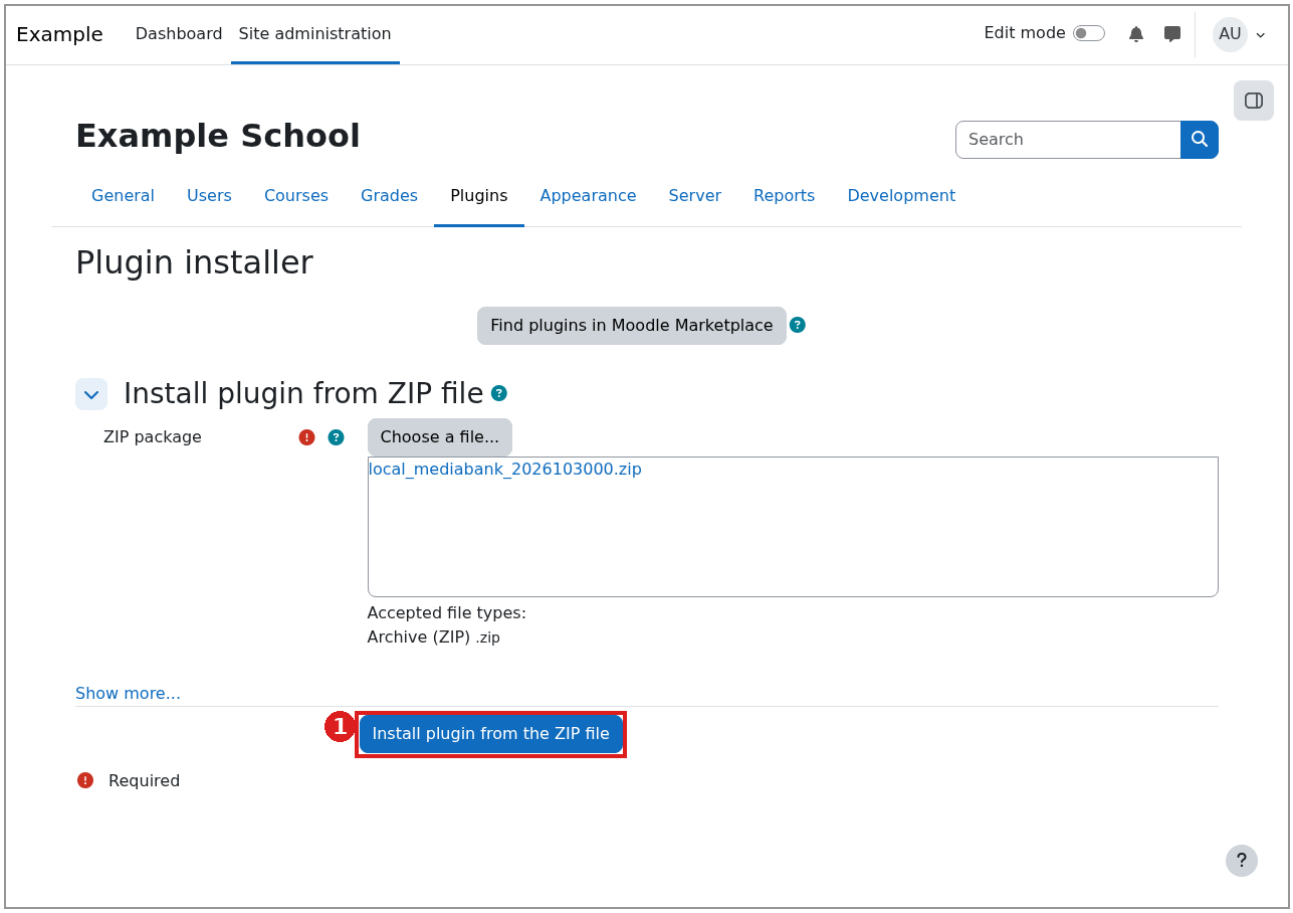

Part 2: Install the helper tools

The tools: **local_mediabank**. This is the same process, with a different file.

12 Upload the second file

Go back to **Site administration → Plugins → Install plugins**. Repeat steps 2 to 6 with the second file, **local_mediabank_2026103000.zip**: click **Choose a file…**, then **Upload a file**, then **Choose File**, pick the file, click **Upload this file**.

When the file name is in the box, click **Install plugin from the ZIP file** (red box 1).

The second file is in the box. Click the blue button.

Be careful. If Moodle says a **dependency** is missing, the main plugin (Part 1) is not installed yet. Do Part 1 first, then come back.

13 Moodle checks the file

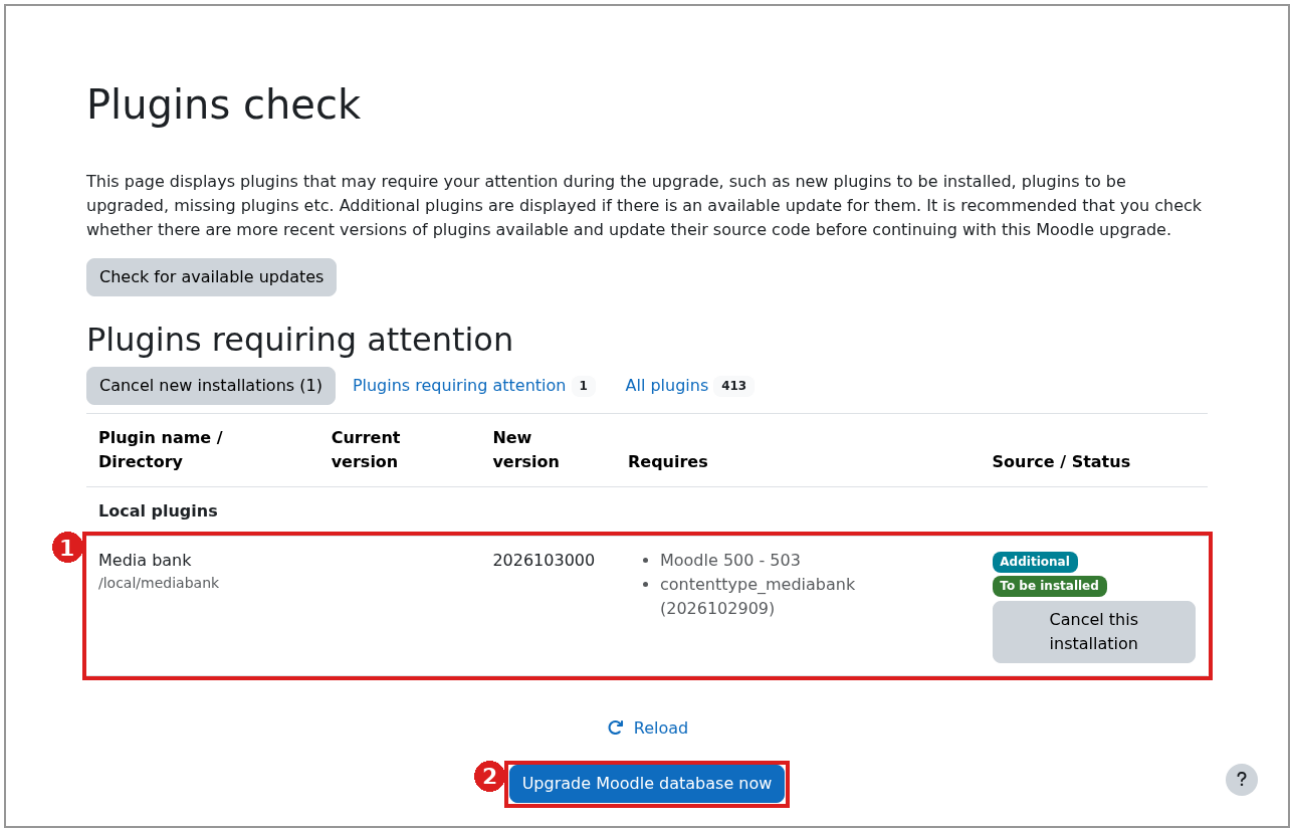

Again you should see **Validation successful**, with the same Beta warning. Click **Continue** (red box 1). On the long server checks page, scroll to the bottom and click **Continue** again.

Validation successful. Click "Continue".

14 Install into the database

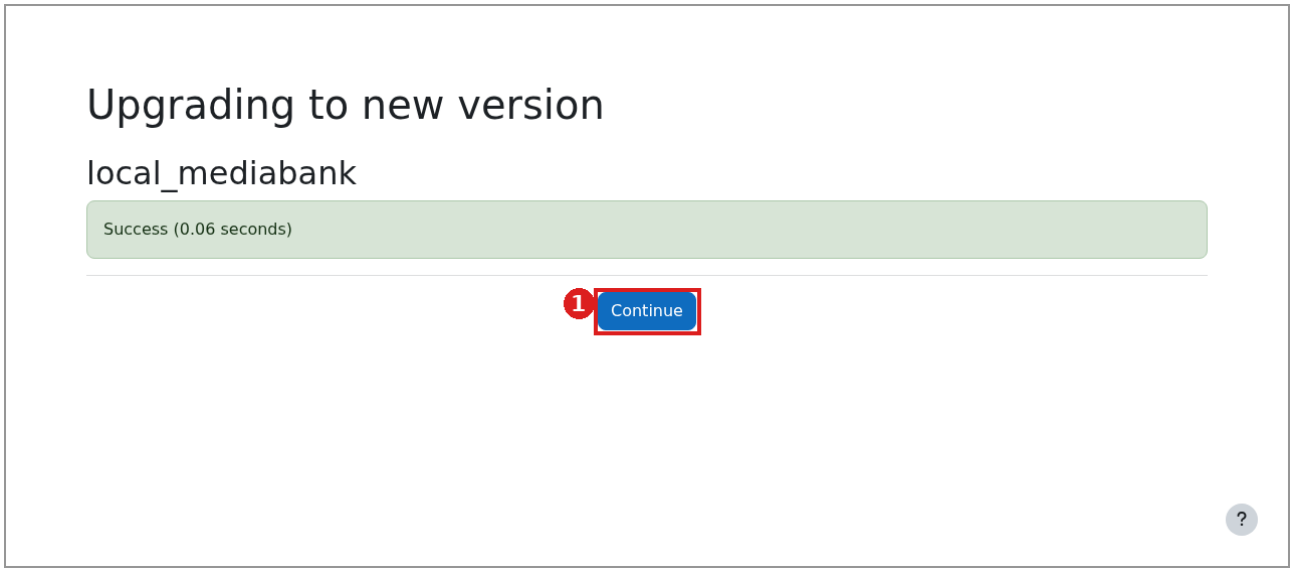

The **Plugins check** page lists the second **Media bank**, under **Local plugins** (red box 1). Click **Upgrade Moodle database now** (red box 2).

The tools plugin is "To be installed". Click "Upgrade Moodle database now".

15 Success

You should see a green **Success** line for **local_mediabank**. Click **Continue** (red box 1). There is no settings page this time. You are back on the Moodle notifications page. **Both plugins are now installed.**

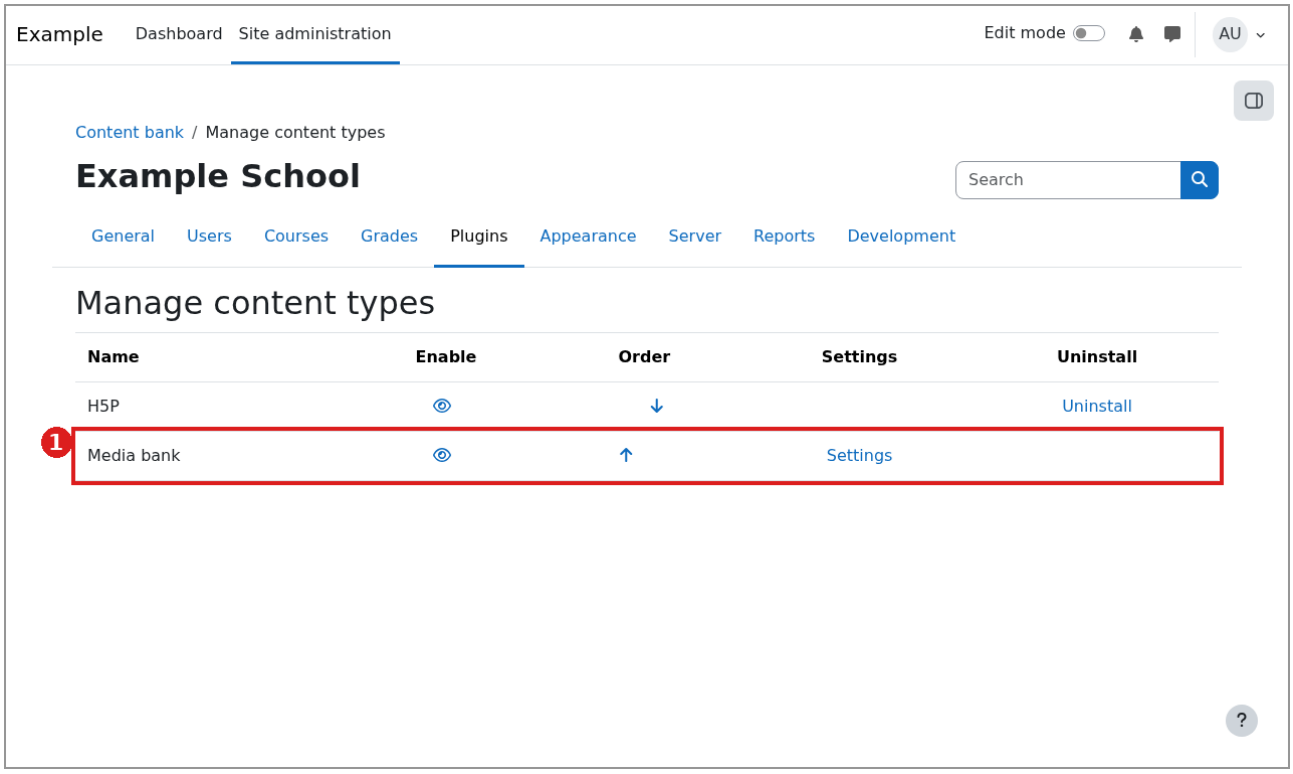

Green "Success" message for local_mediabank.

Part 3: Check that it worked

These checks take about five minutes. Do them all.

16 Is the Media bank switched on?

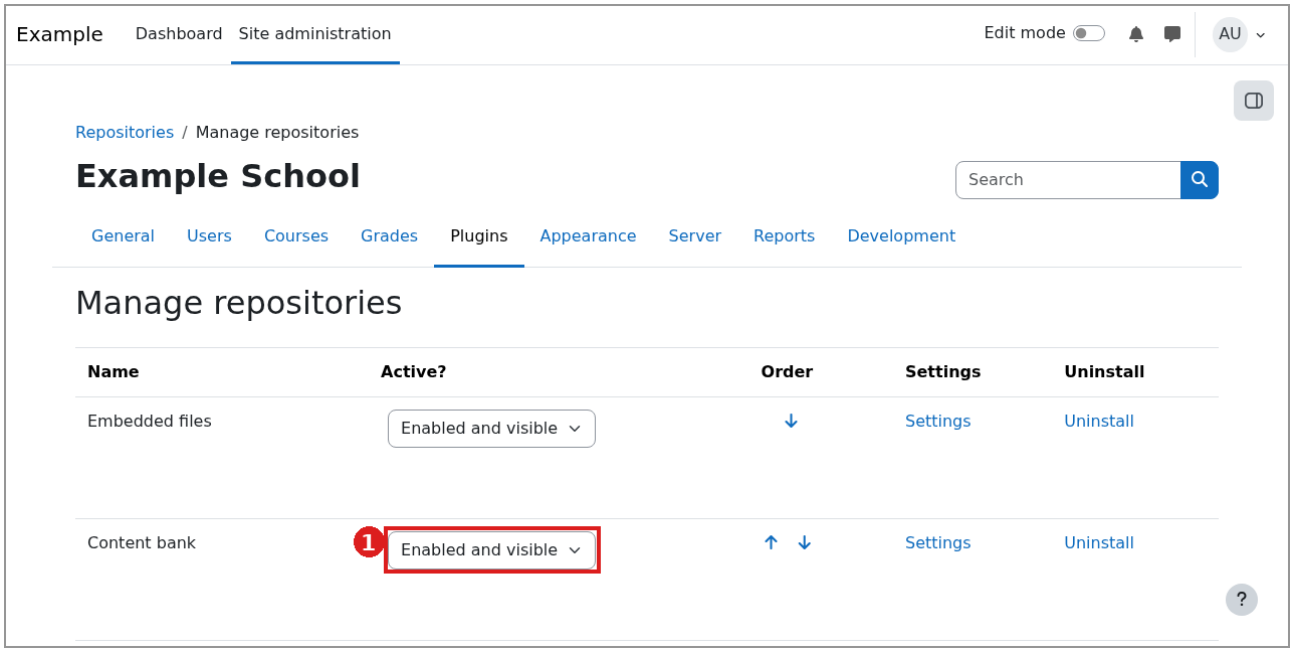

Go to **Site administration → Plugins → Content bank → Manage content types**. **Media bank** should be in the list with an **open eye** in the Enable column (red box 1). If the eye has a line through it, click it once to switch the Media bank on.

Media bank is listed and switched on (open eye).

17 Is the Content bank repository on?

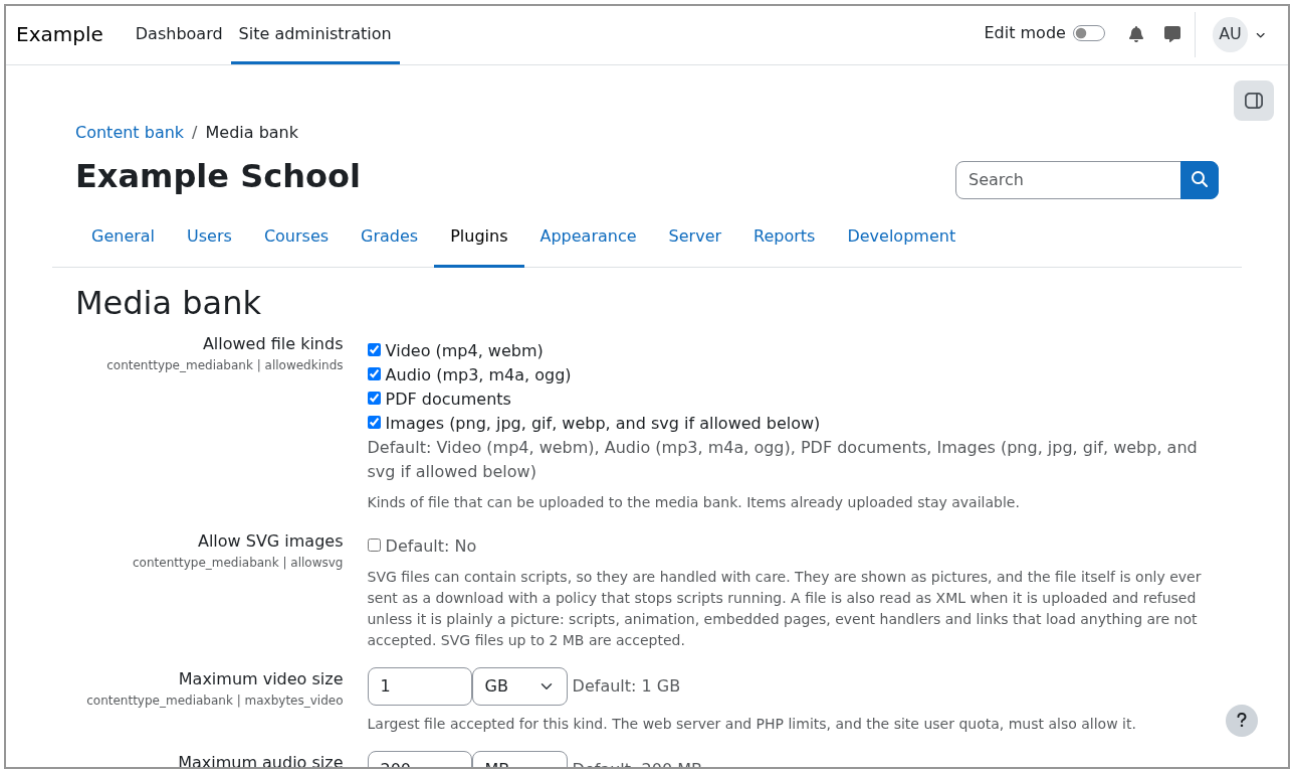

Teachers need this to pick media inside their courses. Go to **Site administration → Plugins → Repositories → Manage repositories**. Find **Content bank** and make sure it says **Enabled and visible** (red box 1). If it does not, choose that from the menu.

The Content bank repository is enabled and visible.

18 Look at the settings

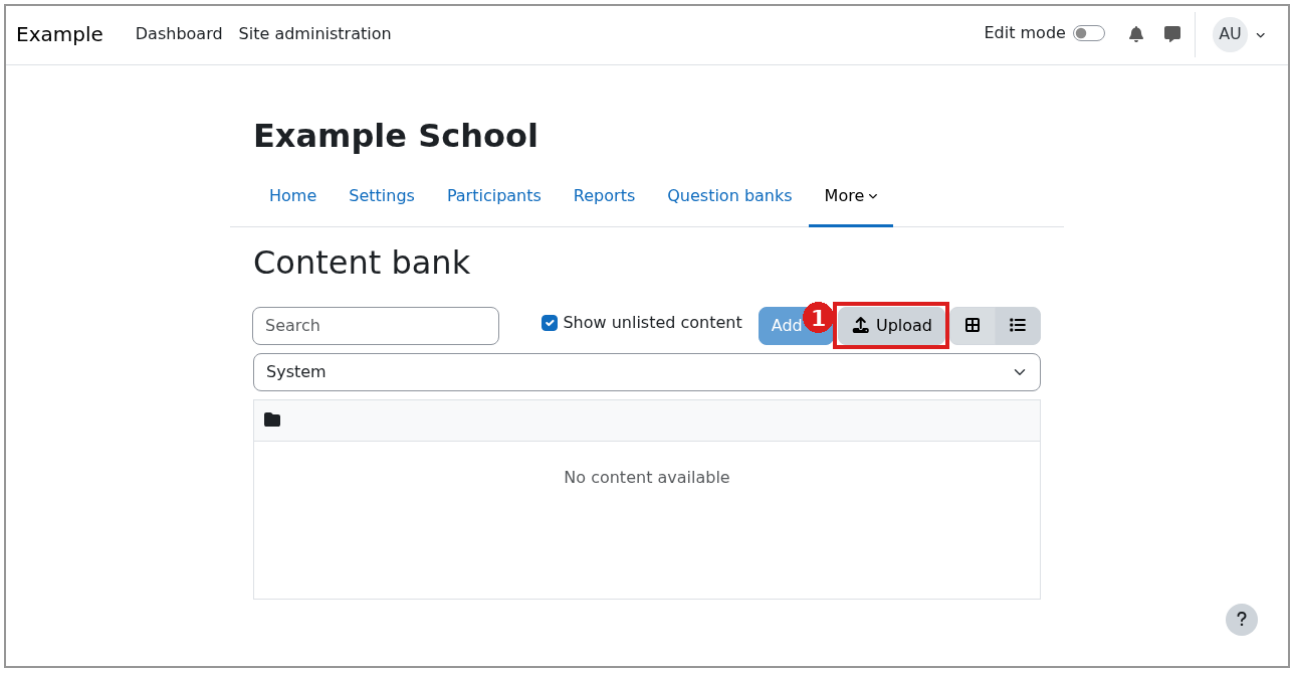

Go to **Site administration → Plugins → Content bank → Media bank**. You should see the settings page: allowed kinds of file, size limits and more. You can leave them as they are. The Administrator guide explains each one.

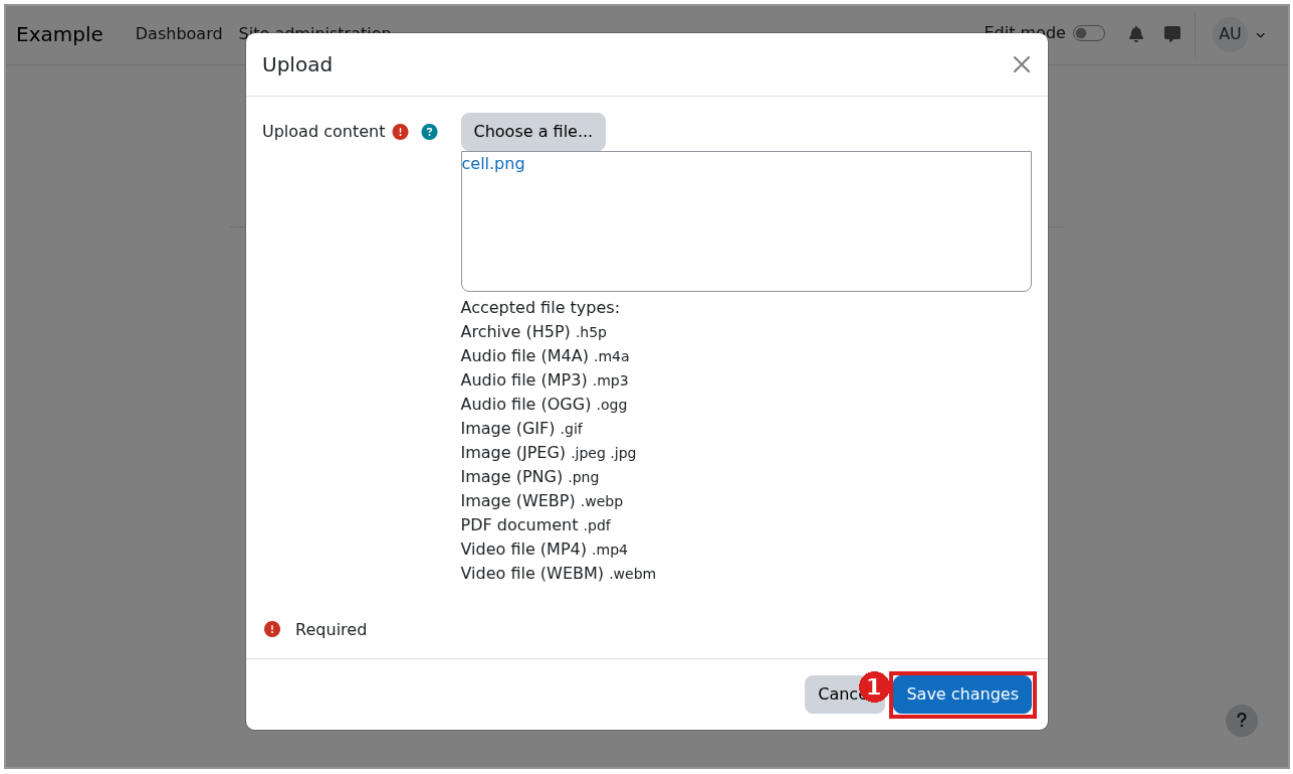

The Media bank settings page.

19 Upload a test picture

Open the **Content bank** (in a course: click **More** in the course menu, then **Content bank**). Click **Upload** (red box 1). Click **Choose a file…**, choose **Upload a file**, pick any small picture or PDF from your computer, click **Upload this file**, then click **Save changes** (red box 1, next picture).

The Content bank. Click "Upload".

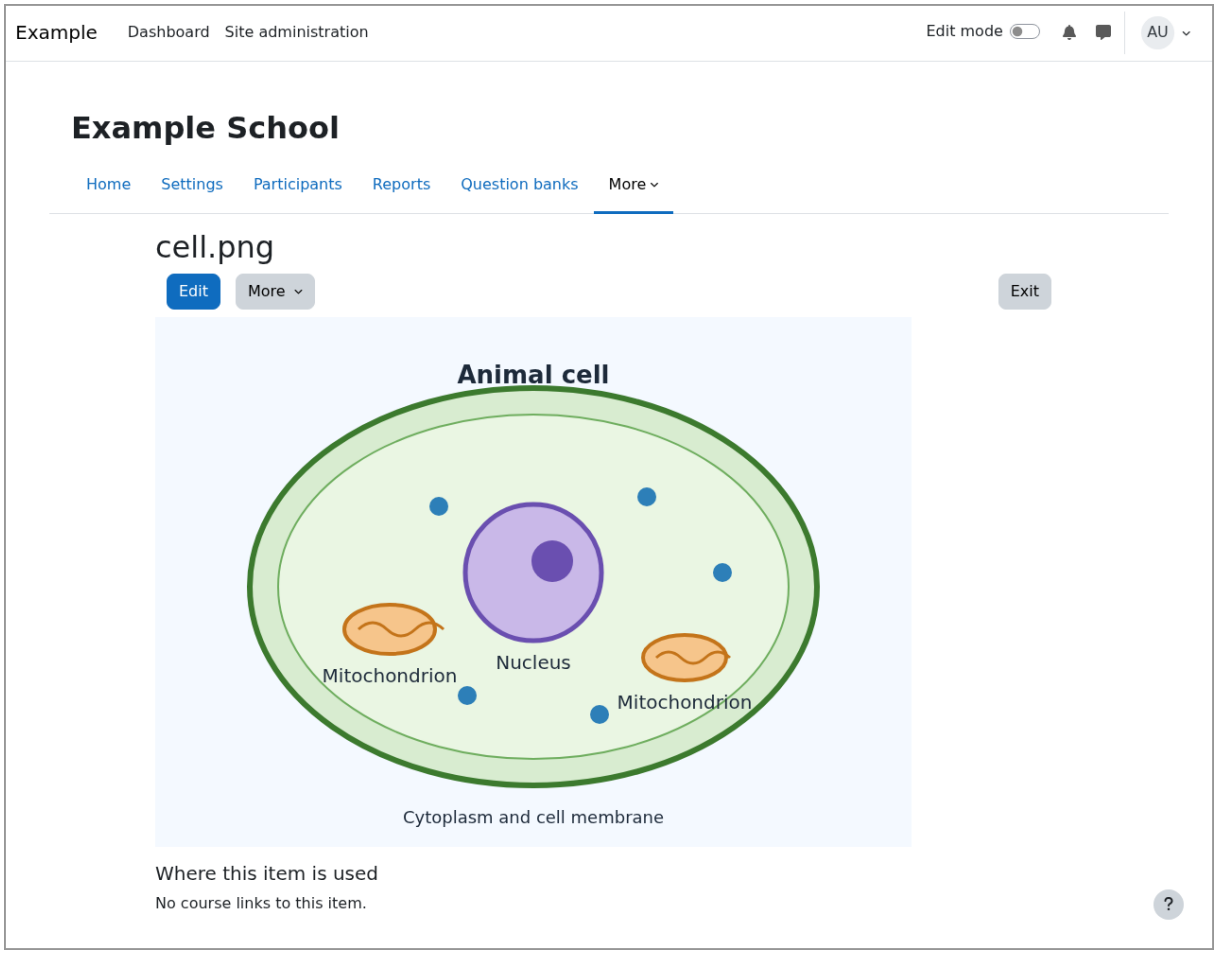

The picture is chosen. Click "Save changes".

20 It works

Your picture opens on its own page, with the buttons **Edit**, **More** and **Exit**, and a panel **Where this item is used** below it. That is the Media bank working.

You can delete the test picture: click **More**, then **Delete**.

The uploaded picture, shown by the Media bank.

Done!

Teachers can now put videos, audio, PDFs and pictures in the Content bank and use them in their courses. Send them the **Teacher guide**.

If something goes wrong

What you see	What to do
There is no "Install plugins" link, or the Choose a file button is missing.	Your site does not allow installing from the screen. Ask your hosting company or Moodle support to install the two plugins "by hand". The Install guide has a section called "Installing by hand" they can follow.
"The ZIP package must contain just one directory", "Plugin name mismatch" or "Plugin type mismatch".	The zip file was opened and re-zipped, or it is the wrong file. Download it again from the Releases page and upload it without opening it.
Moodle reports a missing dependency when you install the second file.	Install the first file (contenttype_mediabank) first. Then try the second one again.
The Install plugins screen says it cannot write to the plugin folder.	The server does not let Moodle change its own folders. Use "Installing by hand", as above.
Media bank is missing from the Content bank, or its eye is crossed out.	Go to Plugins → Content bank → Manage content types and click the eye to switch it on.
Teachers cannot pick media inside an activity.	Check that the Content bank repository is "Enabled and visible" (step 17), and that the teacher can use the Content bank in that course.
A large upload fails with no message.	A server limit is being hit. The Administrator guide section "Large files" explains which ones.
You made a mistake halfway through.	It is safe to start the Part again. If a screen asks you to **Cancel** an install, you can click it and start again.

Upgrading later

When a newer version is released, install the new files the same way, **content type first**. Moodle sees that they are newer and offers to upgrade. **Do not uninstall first.** Uninstalling deletes everything in the Media bank.

More help

- **Install guide**, **Administrator guide** (settings and limits), **Teacher guide**, **FAQ**, **Troubleshooting** and **Upgrading**: in the **docs** folder of the project and inside the bundle file on the Releases page.
